

Design a modern, clean, scrollable, and slidable Categories section for a website. Follow these details exactly:

2. **Logo Section:**

- Below the header, a **large round logo** is centered.
- Inside the circle, place the Pathak Bhandar logo (logo will be provided).

3. **Intro Section:**

- Below the logo, show a **heading with four words**: "Try our other stuff also".
- Below the heading, add 2–3 short lines of description text explaining these Part and their quality.

4. **Categories Section (Key Part):**

- **Stacked horizontal banners** (NOT vertical).
- Each banner is a wide, thin rectangular **card-like hero image**.
- The **background of each banner image has a horizontal blur effect**:
 - From left to right, wherever the text is placed, apply a smooth blur to the image behind the text.
 - The rest of the banner remains clear.
 - This ensures the image remains recognizable, but the text stays clearly visible.
- The **category name is written INSIDE the banner image**, centered and bold.
- The text color (black/white) must automatically adjust for readability.
- Example categories (one banner each):
 - Snacks
 - Sweets
 - Cakes(More can be added later)
- **Sliding + Scrolling behavior**:
 - Each banner can hold 2–3 sliding images.
 - As the user scrolls down, more banners/cards appear.
 - Scrolling down **reveals a fixed bottom navigation panel** (see point 5).
 - Scrolling up hides this navigation panel so more cards are visible.

5. **Bottom Navigation Panel:**

- Hidden by default.
- When the user scrolls down, **smoothly slides in** from the bottom.
- When the user scrolls up, it hides again.
- Contains square icons for quick navigation to different sections.

6. **Interactivity:**

- Clicking a banner opens that category page.
- If a category has no products, open a page that displays:
"No products in this category" along with the company logo.

7. **Visual Style:**

- Clean, modern, and elegant.
- Prioritize **horizontal hero banners**, not vertical lists.
- Ensure the **category name inside the banner** is always clearly visible.
- The partial blur on the banner must dynamically adapt based on the text position.

Make sure the **layout matches the first wireframe** (banners stacked) and the **second wireframe behavior** (bottom nav bar appears when scrolling).
